Age Range: 8 - 12 years
Grade Level: 3 - 7

Customer Reviews

Wow, my kids couldn't put this one down. Especially my ten-year-old son. This is a fun format--jam-packed with questions and answers and so many great pictures. And the questions are both serious and quirky, which makes the book cool and sometimes unexpected. The tone is a bit irreverent, too, which makes the learning that much more fun.

We purchased this book for a gift and, of course, my 5 year old wanted me to read a few things! We absolutely loved this book as it has a lot of interesting and random information! We will be purchasing one for our household as well.

Really fun, interesting facts and written in such a way that I think kids will really love it. The layout of every page is very visually pleasing and makes it easy to read in "chunks" for kids.

My kiddo is a reader. I mean a legit bookworm. I played baseball, she wants to do dumb things like "learn new things" and "figure stuff out." I worked on cars, she wants to "find the meaning to life." Looks like we're not adding trophies to THIS house. Anyway, unless you want your 8 year old to be some nerdy, super smart kid, and be curious, and into science, and stimulate the ability to look deeper into things and become generally well-rounded and probably smarter than most average adults and the envy of all her friends and who will be continually supported by her proud parents for her thirst of knowledge, then don't buy this book.

Warning: Don't buy this book if you want to see your child for the next week. My daughter would read, but I wouldn't say she liked it. This book made her into a bookworm. She walked around with it for days. She liked science, but now she loves it! And she loves feeling smart. It has lead to more thinking and more questions and more reading. The format and great pictures made it easy to start because it doesn't have long chapters. If so, she probably wouldn't have even looked at it. Instead there are smaller sections focused on a question. It improved her reading skills, and even made her read other books more often. Sure, she sometimes brings me the book to ask how to say a word or what it means, but that starts a conversation and helps to make her interested in something new. I highly recommend this book! In fact, we will buy this book in the future as a gift!

If you have inquisitive children, you definitely need this book. It is full of wonderful information - really good stuff. I like it a whole lot and my children and grandchildren have enjoyed it as well. It is a great book to keep for emergencies like being stuck in traffic or waiting with an impatient child for an appointment. You can really learn a lot from this book. It is also a good one for reluctant readers as well as curious people. I do recommend it for children of all ages.

Reading with my 8 year old is fantastic!!! It's an opportunity for us to read together and learn together, for there are so many valuable facts, many of which I sure never knew, as well as a chance to enhance her understanding of things and allow for her to ask questions. It is also very interesting to see what facts get her really excited!!!

I bought this as a gift for my grandchildren. They love it. Just about any why question they can come up with is in this book. I recommend anyone who has curious children to get this inexpensive book. My daughter-in-law said the boys will sit for hours coming up with things to look up.
