Customer Reviews

The book is nice quality. The only problem is that you need an old school flash light with a single bulb to make this work. If you have a new style flash light with a cluster of LEDs, the image will be blurry.

I was disappointed with the quality of this book. I used 3 different flashlights trying to make the images appear more clearly. The projections are terribly fuzzy and hard to recognize even if you know what the constellations are. This was bought to be a present, but I was not able to give this to

a child. The images are hard to process and there is very little text to go with it. What text is there is not very informative or entertaining.

use an iPhone flashlight (or try using whatever phone You have), lay down in a pitch black room & set the phone on your chest with the light shining towards the ceiling. that way You can hold the book with both hands to shine the light through. i haven't found any other light source that works well. all of our flashlights cast blurry pictures. we have a collection of these books & love them.

My grandson and his father enjoy looking at the night sky through his dad's telescope. i hope this will add to their pleasure.

I bought this as a gift for a friends sons, I had to try it out before I mailed it, I think they'll love it!

Love this book, was going to be a Christmas gift but couldn't wait... the grandsons LOVE it.
