Customer Reviews

Oohs and aahs... that is the reaction from my grandson when he unwrapped his Christmas present and looked upon this little gem. Grandpa trumps the popularity stakes with this incredibly illustrated and colourful marvel. Not too complicated in its information so a child of 7 years can read and understand this book as with all DK books makes for the basis of a great children's encyclopaedia collection being interactive with computers via the accompanying CD, it is informative, entertaining and a great start for young minds. P.S. Grandson has promised to name the first new star he discovers after me... Poppy 2013!!!

This book is a good introduction to astronomy. It's easy to read and understand. I now have what I need in a small book.

Christmas gift for my 10-year old grandson who is interested in science

Great book, kids love it
