SpaceX And Tesla Motors Engineer Elon Musk (STEM Trailblazer Bios)

Synopsis

Are you a fan of computers? When Elon Musk was growing up, he taught himself computer programming so he could design his own games. As an adult, he set out to design much more complex tech inventions. Musk started his first tech company when he was twenty-four and quickly made a fortune. Then he moved on to bigger projects. He started a company called SpaceX to build reusable rockets and possibly pave the way for a human settlement on Mars. His other company, Tesla Motors, makes electric cars, which Musk hopes will replace gas-powered vehicles. Then there's the Hyperloop, Musk's vision for a superfast new form of transportation. Find out how Musk defied the odds to build his tech empire and maybe even change the world.

Customer Reviews

I ordered this book as a gift and here is the response. There were no reviews at the time and this is the first one.FYI, the book you ordered me was only about 20 pages long and apparently written for elementary schools. I am not joking. It was published by some sort of lower education publishing house.I still read it and actually learned a few things about Elon that I did not already know. I always thought he was from Canada, but he actually grew up in South Africa and moved to Canada at 17 to

avoid South Africa's compulsory military service for all young adults

Great for children to learn a little about this true American Hero.
